

# Dental Practice Management

## Practice Management

Achieving a successful dental practice requires efficient work processes and resource management to maintain productivity, growth and profitability. A substantial portion of a dental practice's ability to succeed is made possible by employing robust practice management software, digital imaging systems and reliable network infrastructure.

In today's world of evolving technologies these systems offer more features and abilities than ever before. However, as features and options expand, so does the complexity of maintaining them. System outages and problematic practice management software can negatively impact a practice's ability to service its patients.

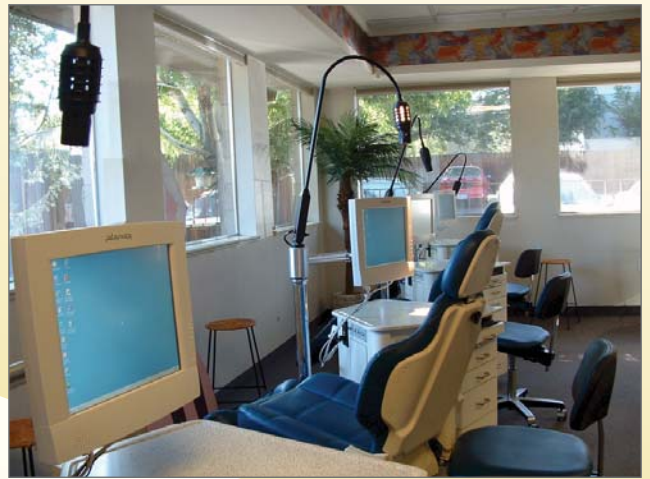

## Latest Technologies

Cypress Systems, Inc. supports all the leading clinical and dental practice management software suites, digital X-ray systems and imaging technologies. Cypress Systems, Inc. has Dentrix Certified Integration Engineers on staff and works closely with practice management software manufacturers to stay abreast of product updates, changes, and feature developments.

## Comprehensive Support

Our extensive portfolio of engineering disciplines allows Cypress Systems, Inc. to offer our clients a full spectrum of system solutions. Whether you have an existing network or seek to create a new one, Cypress Systems, Inc. offers superior results that maximize your technology investment.

Unlike other support companies, Cypress Systems, Inc. focuses on solutions specific to the dental industry. Profitable dentistry is attainable; with Cypress Systems, Inc. as your partner you can focus on the business of growing your practice and providing the best possible service for your patients.
